

Delivering Powerful Phishing Threat Defense & Response

PhishMe delivers a comprehensive human phishing defense platform focused on fortifying employees – your last line of defense after a phish evades your other technology – and enabling incident response teams to better identify, verify and respond to targeted phishing attacks.

PhishMe Simulator and PhishMe Reporter turn employees into informants through active engagement by simulating real-world phishing attempts, providing on-the-spot education (when needed) and easing the reporting of suspicious emails to security teams. PhishMe Triage enables IT security teams to automate and optimize phishing incident response by allowing them to prioritize reported threats. PhishMe Intelligence provides security teams with 100% human-verified phishing threat intelligence.

Centripetal Networks is a cyber-security solutions provider specializing in Real-Time Active Network Defense. Its core product, RuleGate®, is a high performance network appliance that acts as a threat intelligence gateway with up to 10 gigabits per second throughput. The QuickThreat® solution synchronizes dynamic threat intelligence across paid subscription vendors and open source data feeds into the threat intelligence gateway. QuickThreat offers security teams the ability to take action and block, allow, or alert on threat indicators it has acquired and aggregated across its intelligence sources.

Collectively with PhishMe Intelligence and QuickThreat, security teams have a powerful defense against credible phishing threats.

Phishing Intelligence

- ✓ Relevant, fresh, and contextual MRTI with no false positives
- ✓ High fidelity intelligence about phishing, malware, and botnet infrastructure
- ✓ Human-readable reports to understand attacker TTPs

Correlation and Actionable Decisions

- ✓ Aggregate multiple threat intelligence services to take action based on predefined policies
- ✓ Operationalize trustworthy phishing intelligence
- ✓ Network-based threat intelligence gateway without latency implications
- ✓ Real-time phishing threat visibility

CONDITION EMPLOYEES To Recognize and Report Threats

SPEED INCIDENT RESPONSE
Collect, Analyze, and Respond to Verified Active Threats

IR Team Challenges

Alert Fatigue

Too many threat intelligence feeds are full of false positives that distract security analysts. Excessive alerts only exasperate overwhelmed analysts with a finite amount of time.

Actionable Intelligence

Security teams are hesitant to trust their sources of intelligence for fear of disrupting the business. Real-time correlation and prioritization of security events and the confidence to deny the communication is absolutely critical when seconds matter in blocking the threat.

Attackers Evading Technical Controls

As technology evolves to defend against threats, the attackers' creativity enables them to find ways into the employees' inbox hoping they will open the attachment or click the link. This can be thwarted through credible and trustworthy intelligence applied to network policies based on threat severity.

How It Works

PhishMe Intelligence and Centripetal Networks QuickThreat deliver the ability to acquire, aggregate and take action from phishing-specific machine-readable threat intelligence (MRTI). Using high fidelity phishing intelligence means that analysts can prioritize and decisively respond to alerts from intelligence consumed via PhishMe's API. QuickThreat's position on the network means that security teams can take action based on the severity of the phishing indicators acquired and aggregated both with ingress and egress traffic.

PhishMe Intelligence uses easy-to-identify impact ratings of major, moderate, minor, and none, for teams to create rules based on the level of impact. When these indicators are received by QuickThreat, policies can be defined to operationalize threat intelligence and decisively block, allow, or alert, based on the predetermined desired action.

Furthermore, PhishMe Intelligence provides rich contextual human-readable reports to security teams, allowing for in-depth insight into the criminal infrastructure. Analysts and security leaders will have visibility into email message contents, malware artifacts with full threat detail, and executive summaries, to easily understand the threat actor's TTP operation and risk to the business.

PhishMe Intelligence ingested by QuickThreat supplies indicators for network-level block, allow, and alert actions for the following types of indicators:

- Payload URLs and Exfiltration Sites
- Malicious IP Addresses
- Command and Control Servers
- Compromised Domains

In addition, PhishMe provides access to the Active Threat Report and full threat detail for the above correlated event.

With this formidable combination, security teams can respond quickly and with confidence to mitigate identified threats. Threat intelligence that is operationalized with a high degree of confidence leads to actionable decisions based on security policies for ingress and egress traffic.

About Centripetal Networks

Centripetal Networks was founded with one vision, to protect networks from advanced threats by simplifying intelligence-driven security. Centripetal has invented core-networking technologies that meets the scale of the cyber threat intelligence challenge. Centripetal maintains the largest threat intelligence partner ecosystem, providing community based solutions to defeat sophisticated cyberattacks.

PhishMe is the leading provider of human-focused phishing defense solutions for organizations concerned about their susceptibility to today's top attack vector – spear phishing. PhishMe's intelligence-driven platform turns employees into an active line of defense by enabling them to identify, report, and mitigate spear phishing, malware, and drive-by threats. Our open approach ensures that PhishMe integrates easily into the security technology stack, demonstrating measurable results to help inform an organization's security decision making process. PhishMe's customers include the defense industrial base, energy, financial services, healthcare, and manufacturing industries, as well as other Global 1000 entities that understand changing user security behavior will improve security, aid incident response, and reduce the risk of compromise.
